

The loading dock for the Marcus Center is located on State Street, just west of Water Street, at the intersection of Edison Street and State Street. Usual hours of operation for the loading dock are between 9:00 a.m. - 5:00 p.m., Monday through Friday. Access to the loading dock at any other time must be scheduled in advance through the Marcus Center's Technical Director.

The loading dock is located at stage level and consists of two loading bays allowing for two trucks to be loaded simultaneously.

The dock has two overhead coiling doors, sized: 9' x 10'-4". Each bay is equipped with a hydraulic dock leveler to accommodate different height trucks from 2'-4" to 4'-4". Level dock height is 40". Leveler capacity is 20,000 lbs. A 48' trailer engaged to the dock will incur a 2% grade.

The dock is located approximately 30' from the upstage left opening to the stage. The dock way is 12' wide by 12' high, with a left turn through an overhead coiling door 10' x 12' in size to the stage. See loading dock drawing for details.

Trucks will not be allowed to stay in the dock area once trucks are unloaded. THERE ARE NO EXCEPTIONS.

Trucks may park on the street only prior to unloading and loading. On site long term parking is not available near the Marcus Center and must be found elsewhere.
